C12-229 - Community Partners

Project Narrative

A large amount of effort has gone in to identifying phosphorous loading and other nutrient sources in West Washington County. Installing stormwater retrofit projects at local church campuses represents a major opportunity for water quality improvement. In partnership, three watershed organizations will install conservation practices, targeting impervious surfaces on the campuses. This project will provide funding to install raingardens, pervious pavement and rainwater harvesting methods to capture and improve water quality to downstream water resources.

Proposed Outcomes:

Project Outputs: Install a pervious pavement patio, dry creek bed, and four raingardens.

Actual Outcomes:

Project in Progress
