C12-226 - Clean Water Assistance

Project Narrative

Eroding streambanks along Bassett Creek are reducing the water quality of the creek and the Mississippi River. This project consists of stabilizing a 3,100 foot reach of Bassett Creek mostly located within Theodore Wirth Regional Park. The proposed stabilization measures will result in an estimated reduction of 52 tons of sediment and 60 pounds phosphorus per year.

Proposed Outcomes:

Restore and protect a 3,100-foot reach of Bassett Creek, including 9 individual sites where significant erosion is occurring.

Proposed Reductions: 60lbs/year of Phosphorus and 52 tons/year of Sediment

Actual Outcomes:

Project in Progress

Stabilizing Bassett Creek
